

Duct Liner/Resistance Weld Pin

Duct liner pins are used to attach insulation to sheet metal air ducts, and are generally applied during the duct fabrication stage. They can be welded in place with a manual load spot welder or an automated spot welder. The duct liner pins are available with a flat top dish or a beveled edge dish-usually determined by user preference.

Specifications			
Material	Gauge	Washer	Length
Pin-Zinc Coated	10 gauge	1" Galvanized Flat or Beveled Dish	1/2" to 2"
