

Perforated Base Hanger

Perforated base hangers are insulation pins used for attaching insulation to various base materials. The hangers are generally secured with an adhesive, but can also be attached with screws, powder actuated and gas actuated fasteners. After the hanger is in place, the insulation is impaled on the hanger and secured with an insulation washer (speed clip).

- Nail is 12 gauge in diameter.
- Nails are fully annealed, low carbon steel with galvanized plating.
- Base is low carbon steel with galvanized plating.
- Stainless steel and aluminum are also available as a special order.
- 90 degree and double bend hangers also in stock.
